Attendees: Kent, CW, Jim, Nancie, George, Pete, Arnold

1. Jul 31 - Kent will do presentation on shortcuts/status indicators, possibly with aid of Don McAllister videos

- Future presentations - Can any of these be expanded into the topic of a future presentation (can be less than 60 minutes)?

- Mesh routers - Allison declined invitation to speak on this, suggested Pat Dengler, CW is interested in this, mesh system vs extender is one tradeoff

- 2FA - The Aug newsletter will contain an article on this. The article uses terms that may not be generally understood.

- Wifi - George said that there is a way to determine how many devices are connected to your wifi, but he did not elaborate. He also said that he prefers ethernet. How would you find out which of your devices is a bandwidth hog?

- Arnold's Tesla battery helped him survive a 9 hour power outage. He agreed to do a presentation on this, but he will not be at the July meeting

- Parallels Desktop - Nancie is interested in this

- 32 bit apps - Etrecheck (free, with in-app purchases) is a good program to help with this in case you want to delete 32 bit apps before upgrading to Catalina

2. VFW internet and wifi performance is subpar. CW will do test to see if replacing the VFW router makes a difference. Other options are new modem, new ethernet cable, HDMI to Apple TV, faster internet connection. Meeting with VFW brass is desired.

3. Financial, membership, other: current membership = 86
